

SPOTLIGHT

GEOPHYSICAL SERVICES

Spotlight Geophysical Services provides innovative geophysical services for geotechnical and environmental applications. Our highly qualified geophysicists work on all phases of the project using strict quality control procedures and following ASTM guidelines. We take the time to acquire accurate data and report the results in a useful format for our clients. We own and maintain an inventory of state-of-the-art geophysical tools. Spotlight Geophysical Services is available for projects throughout the United States and abroad. Based in South Florida, we are conveniently located for quick response to projects in the Southeastern U.S., the Caribbean, and Latin America.

Services and Applications

- *Microgravity, electrical resistivity imaging, and MASW* for karst (sinkhole) and geologic hazards
- *Seismic refraction and MASW* for rippability, Vs30 site classification, and geotechnical studies
- *Shallow marine geophysical methods* for harbor development, pipeline routing, and canal seepage
- *Ground penetrating radar (GPR) and electromagnetic methods* for environmental and geotechnical assessments, including landfills, brownfields, and contaminant mapping
- *Seismic and electrical methods* for groundwater resource investigations
- *Electrical resistivity measurements* for geologic and electrical grounding applications

Certifications

- Miami-Dade County Florida SBE
- South Florida Water Management District SBE
- Licensed Florida Geologic Business (#GB655)
- Licensed Professional Geologists/Geophysicists
- OSHA HAZWOPER trained (29 CFR 1910.120)
- Active member of AEG, EEGS, and SEG
- Professional/General/Pollution liability insurance
